Javier Ponz

Technical support · support engineering · agent operations

Aberdeen, Scotland, United Kingdom · nerion89@gmail.com · linkedin.com/in/javierponz · github.com/ponzgpt · javierponz.technoir.cloud

PROFILE

Ten years of technical support at Apple — Genius, remote AppleCare, in-store leadership: diagnosing unfamiliar hardware and software faults, escalating with a case someone can act on, and training the technicians who came after me. Colleagues used my case notes as the example to follow. I now use Hermes Agent daily, run my own production VPS and build small support tooling with an agent beside me, saying which parts the agent wrote. Looking for support engineering roles.

Independent since August 2024, in Aberdeen: studying, and building tools in public. Neuronara — cited answers over clinical neurophysiology standards, built for my partner, a clinical neurophysiologist, and improved in a feedback loop with her (specified by me, written with an agent). Memento Mori — a privacy-first web app I wrote and deployed. All of it on a VPS I administer; live at javierponz.technoir.cloud and github.com/ponzgpt.

EXPERIENCE

Lead In-Store Experience — Apple Retail (secondment, twice) Feb — Aug 2023; Feb — Aug 2024
Xanadú (Arroyomolinos), then Parquesur (Leganés), Madrid

- Two seven-month leadership secondments taken while holding the Genius role: trained technical and sales staff, ran weekly cross-team alignment, co-owned scheduling optimisation.
- Handled the escalations and disagreements that fit no procedure; noted by my manager for high visibility with the Support team and store leadership.

Genius — Apple Retail March 2018 — August 2024
Parquesur, Leganés, Madrid

- Diagnosed and repaired Mac, iPhone and iPad hardware and software faults, owning each case through post-repair checks; repair times among the shortest on the team while covering front-of-house support; NPS stable and at or above the team average.
- Colleagues used my case notes as the example to follow; standardised documentation to Apple guidelines, which shortened their appointments. Proposed repair-room process fixes to store leadership and linked Support with the stockroom on dead-on-arrival parts.
- Mentored newer technicians and new Geniuses through shadowing and case feedback; trusted by Lead Geniuses to run floor resourcing and walk-in triage.

AppleCare Support Advisor — Apple March — June 2020
Remote, Madrid · COVID volunteering

- Tier 1 by phone, email and chat, several cases at once, under structured troubleshooting and documentation standards.
- Escalated what Tier 1 could not resolve: documented the case, briefed Tier 2 first, then a live three-way handoff with the customer.

Specialist, then Technical Specialist — Apple Retail September 2014 — February 2018
Parquesur, Madrid

- Foundations in diagnosis, consultative support and execution under pressure.

EDUCATION AND CERTIFICATIONS

Specialist in Artificial Intelligence 2024 — 2026, in progress
Universidad Rey Juan Carlos, via Racks University

Full Stack AI Developer 2025 — 2026, in progress
Universidad Rey Juan Carlos, via Racks University

Industrial Engineering (Electronics and Automation) 2008 — 2013, 80 ECTS, not completed
Universidad Politécnica de Madrid

Apple Certified Mac Technician (ACMT) · Apple Certified iOS Technician (ACiT) · English — Cambridge CAE (C1)

SKILLS

Agents and AI: Hermes Agent, Model Context Protocol (MCP), agent workflows, workflow QA, OpenRouter, llama.cpp, Ollama, local inference, prompt and failure-trace debugging.

Infrastructure and deployment: Docker, Docker Swarm, Dokploy, Traefik, nginx, Linux — Arch, Fedora, Omarchy, VPS administration, GitHub Actions, CI/CD.

Development: JavaScript, TypeScript, Python, Astro, Swift, Git.

Practice: Technical support, customer success, technical troubleshooting, failure-mode investigation, documentation, mentoring, team leadership.

Building towards: vLLM, Proxmox, self-hosted homelab, agent operations.

Languages: Spanish (native), English (Cambridge CAE, C1).
