PROFILE

Ten years at Apple Retail across technical diagnosis, consultative selling, remote support and team leadership, now operating open agent systems daily and shipping small software to production.

The job I am best at is being the human between people and their machines: translating between what the engineer means, what the sale promised, and what the person actually has on their screen. Most support failures are a translation failure rather than a technical one.

Strongest where systems fail — investigating failure modes, debugging workflows, and writing down precisely which assumption broke. I have been building and overclocking PCs since I was a teenager, which is where the interest in what hardware can actually do came from, long before I had an argument for it.

I run local inference on my own hardware — llama.cpp serving a dense Qwen3 27B (GGUF, Q6) from an RTX 5090, exposed as an API and wired into Hermes Agent — on Arch, Fedora and Omarchy, and I am building a self-hosted homelab on Proxmox. After a decade inside a closed platform I am deliberately unwinding that: off Google services, learning OSINT, GrapheneOS next. Privacy and data sovereignty are the point of the work, not a side effect of it.

One conviction carries across every role I have held: leading is serving. The measure of a tool, like the measure of a lead, is whether the person depending on it ends up with more capacity than they started with.

SELECTED WORK

Memento Mori — native widget + web demo, live in production

2026

memento.technoir.cloud · Apache-2.0 · github.com/ponzgpt/memento-mori

Native menu-bar/Waybar widget is the product; this is its bilingual web demo (English default, Spanish toggle), running the same World Bank life-expectancy model plus six lifestyle factors. No accounts, no backend, no analytics — all computation in the browser. Docker, nginx and Traefik on a VPS I administer, behind an eight-check release gate that refuses to publish on red. Cross-platform CI on Linux, macOS and Windows.

Hermes PKM Toolkit — MCP server and agent skills

2026

MIT · specified by me, implemented by an agent · github.com/ponzgpt/hermes-pkm-toolkit

Model Context Protocol tools for operating local Markdown vaults safely, with a filesystem-safety layer and tests covering path-traversal rejection and absolute-path neutralisation. I wrote the specification and the safety requirements; Hermes Agent produced the implementation from them. Listed because directing an agent to a usable result is the skill I am practising, not as code I could walk through line by line.

Mental Models Toolkit — agent skill pack

2026

MIT · models mine, packaging agent-generated · github.com/ponzgpt/mental-models-toolkit

Thirty machine-readable decision and risk models, schema-validated in continuous integration, written to be read by an agent rather than by a person. The selection and the models are my work.

The Aberdeen Daily — nightly local newspaper agent

2026

MIT · fork of vaelkeep/hermes-paper-agent · github.com/ponzgpt/aberdeen-daily

An open Hermes Agent project adapted to my city: local feed sources, editorial rules and city-specific configuration. The architecture is upstream, not mine — one commit of seventeen is my own.

EXPERIENCE

Founder — Machines Do It Better

August 2024 — present

Aberdeen, Scotland · independent

An agent consultancy for individuals and small businesses, premised on privacy, data sovereignty and customisation to a specific use case rather than the deterministic workflow tooling most agencies sell. Designing, deploying and stress-testing agents and automations in Docker and Dokploy with OpenRouter and Telegram; operational documentation and workflow QA. No clients to date. Editorial newsletter covering AI, robotics and fintech.

Lead In-Store Experience — Apple Retail (secondment, twice)

February — August 2023; February — August 2024

Xanadú (Arroyomolinos), then Parquesur (Leganés), Madrid

Two seven-month leadership secondments taken while holding the Genius role. Ran floor experience for the store: planning, resourcing, events, maintenance coordination, structured feedback and the situations that fit no procedure. Led by removing obstacles rather than issuing instructions.

Genius — Apple Retail

March 2018 — August 2024

Parquesur, Leganés, Madrid

Six and a half years as the technical baseline of the store: advanced hardware and software diagnosis on the cases nobody else had resolved, translating them for people with very different levels of understanding, and bringing newer technicians onto the bench. The two leadership secondments above sit inside this run.

AppleCare Support Advisor — Apple

March 2020 — June 2020

Remote, Madrid · COVID volunteering

Concurrent remote support cases under structured troubleshooting and documentation standards, working autonomously.

Specialist, then Technical Specialist — Apple Retail

September 2014 — February 2018

Parquesur, Madrid

Foundations in diagnosis, consultative support, practical problem solving and execution under pressure.

EDUCATION AND CERTIFICATIONS

Specialist in Artificial Intelligence

October 2024 — December 2026, in progress

Universidad Rey Juan Carlos, via Racks University (IUNIT-affiliated)

Full Stack AI Developer

September 2025 — December 2026, in progress

Universidad Rey Juan Carlos, via Racks University (IUNIT-affiliated)

Industrial Engineering (Electronics and Automation)

80 ECTS completed, degree unfinished

Universidad Politécnica de Madrid · 2008 — 2013

Apple Certified Mac Technician (ACMT); Apple Certified iOS Technician (ACiT)

Certified

Apple

English — Cambridge Certificate in Advanced English (C1)

Certified

Cambridge Assessment

SKILLS

Agents and AI: Hermes Agent, OpenClaw, Model Context Protocol (MCP), MCP server development, agent workflows, workflow QA, OpenRouter, llama.cpp, Ollama, LM Studio, local inference on own GPU, prompt and

failure-trace debugging.

Infrastructure and deployment: Docker, Docker Swarm, Dokploy, Traefik, nginx, Linux — Arch, Fedora, Omarchy, VPS administration, TLS / Let's Encrypt, GitHub Actions, CI/CD, release gating, PC building and overclocking.

Development: JavaScript, TypeScript, Python, Astro, Swift, HTML, CSS, Git, unit testing, static site generation.

Practice: Technical support, customer success, customer-facing technical work, technical troubleshooting, failure-mode investigation, customer operations, consultative selling, technical writing and documentation, de-escalation, mentoring, team leadership.

Currently learning: vLLM, Proxmox, NAS under a hypervisor, virtualisation, networking and Pi-hole, self-hosted homelab, OSINT, GrapheneOS, de-Googleing.

Languages: Spanish (native), English (Cambridge CAE, C1).
